

## Approaching the quantum jump

<https://www.youtube.com/watch?v=AL7GTJK-NWC>

When a person begins to make changes in their life, even if they are positive and in their best interest, there is a high risk of "self-sabotage." Each individual fights with himself, is prone to receiving resistance from society because we have an environment around him or have a tendency to predictability and routine. When there is a change in our lives, in any direction in question, we stop and retract ourselves. This is complacency and therefore a regression. We will talk about the changes that are accompanying us and that we rarely perceive, but that are becoming more visible and observable. We approach the quantum leap. As we are doing more with our new environment and with ourselves, we will be able to move more easily towards a change. Those who do not make the necessary changes will be very likely to experience shock and trauma. Those who may not be able to deal with change will be the ones who will discuss and control their environment. Those who will adapt better to change will often be those with some kind of spiritual orientation. Their external realidad may direct them worse than their internal vision. Follow your own truth, not mine in the face of the undeniable changes to occur, both terrestrial climatic type and in the form of social conflicts, we will have to rely more on our intuition and our communities. Many spiritual disciplines say we are in times of illumination. It will be in this process of change where one could suffer more. Large-scale events in the solar system, as well as planet-physical transformations, being caused by the lack of uniformity of material and energy in interstellar space. On his journey through interstellar space, the heliosphere, the solar system, travels in the direction of the Apex Solar, in the constellation of Hercules. On its way it has been found with matter and energy that contains hydrogen, helium and hydroxyl ions in addition to other elements and combinations. This type of dispersed plasma in interstellar space is presented by structures of magnetized strips and stretch marks. The heliospheric transition

of the solar system through this structure has led to an increase in the shock wave against the solar system. This shock wave thickening has caused the formation of a collusive plasma in a parietal layer, which has resulted in a plasma around the solar system and then its irruption into the interplanetary domains. This advance is a type of donation of matter and energy made by the interplanetary space to our solar system.

### OTHER GREAT PHYSICAL PLANETOPHYSICAL TRANSFORMATIONS

A change in the quality of the interplanetary space in the direction of an increase in its planetary interplanetary and solar transmitting properties. The emergence of new states and the activity regimes of the Sun. The following processes are taking place on the distant planets of our solar system, essentially driving throughout the system a growth of dark spots on Pluto; Auroras reports on Saturn Reports of polar changes in Uranus and Neptune. These are magnetically conjugated planets and the sharp large-scale increase in the intensity of the Uranus magnetosphere. A change in the intensity of the light and the dynamics of points of light in Neptune; The duplication of the intensity of the magnetic field of Jupiter and a new series of new states and processes observed on this planet as a result of a series of explosions caused by Comet SL 9 that excited the Jovian magnetosphere, inducing excessive generation of plasma and its release in the same way, as well as solar coronal holes inducing a radiation belt appearance becoming more and brighter in The decimeters band. A flow of ionized hydrogen, oxygen, nitrogen, is directed towards Jupiter from the volcanic areas, through a flow tube of one million amps. It is affecting the character of the magnetic process of Jupiter and intensifying the genesis of its plasma. A series of transformations in the Martian atmosphere increasing its biosphere quality, in particular cloud growth in the equatorial area and unusual growth in ozone concentration. Important chemical physical changes observed in Venus, an inversion of dark spots and light detected for the first time and a drastic decrease in sulfur-containing gases in its atmosphere. Environmental and geophysical processes of the planet. The progressive modifications in the Sun-Earth relations with the effects and activity in the heliosphere of our solar system. A global reorganization and transformation of the physical and environmental qualities of the Earth is taking place now. On our own planet these new events have put strong pressure on the geophysical environment. New qualities can be observed in natural processes here on Earth. Causes and effects that have already produced hybrid processes along the planets of our solar system. There is a combination of effects on natural matter and energy. The role of the magnetic field on human life and all biological processes and this changing state of the Earth's geomagnetic field. The Earth's natural response to this increased level of saturation reveals itself in its intensity of the dipole, its location of magnetic poles and in its resonance processes of the electromagnetic field. The current phase of geomagnetic frequency investment growth may not lead to an increase in ocean volume due to polar heating but to a decrease in ocean levels. Frequent investments mean stretching and expansion. Rare investments mean contraction. Planetary processes as a rule occur in complex and dynamic ways, which require the combination and union of all forces and fields to properly understand the entire system. The Earth is number one among all the planets of the solar system, with respect to its specific capacity in relation to the magnetization of matter. Important alterations or breakdowns in climatic "machinery" and severe biosphoric effects. These

climatic transformations and the material composition of the Earth's atmosphere, flows and discharges of radiation material, material, plasma through the polar regions and through magnetic places of the world. The growth of the direct ionospheric effects, in the relationship between the climatic fields The temperature fields, the magnetism of the Earth, there is a growing probability that we are entering a period of rapid temperature instability, similar to that which took place ten thousand years ago. Such transformations of high speeds of the global climate and its effects on the physical and biospheric qualities of the Earth. The increases in the earth's temperature depend on, and are, directly related to the interactions with the terrestrial space, whether land-sun, solar-solar system and earth-interest. The redistribution of ozone Redistribution of vertical and horizontal ozone content is the main indicator of general climatic transformations on Earth. Ozone concentrations also have a strong influence on Earth's biosphere processes. Earth's alterations are becoming irreversible. These transformations are being caused by highly charged material and lack of energy uniformity in the interstellar space, which have broken into the interplanetary area of our solar system, this donation of energy is producing hybrids and excited states of energy on all planets, as well as in the Sun. The effects here on Earth will have to be found in the acceleration of the change of magnetic poles the distribution of the content of the vertical and horizontal ozone and in the increase in the frequency and magnitude of significant catastrophic climatic events. The Age of Aquarius, the era of individual enlightenment and the brotherhood of man, will only manifest itself fully after a purification process. We all want to see things happen with the minimum of suffering and the maximum benefit, but the current reality and the message of the ancients reveals a different plot, which we must accept as a manifestation of cosmic will intelligence. Since the Earth was created, the Pleiades have been functioning as a local lenter for galactic transmissions for the Earth. Hence the deep internal memories of this system. Since harmonic concordance in 1987, the Earth is so far evolving to finally receive energy and frequencies directly from the Galactic Center. The evolution of the Earth and its jump towards new realities. Many of the galactic responsibilities of Earth and humanity are being transmitted directly to all of us. Waking up to your internal spiritual reality is the mirror of what is happening in the galactic consciousness. According to channeled information, aliens will be helping our transition during this photon belt event. It is claimed that the basic polarity of the Sun was modified many years ago, so that it can maintain the integrity of the solar planetary system. The NASA space probe Ulises detected that the magnetic field of the Sun no longer has a north or south pole. The Sun's magnetic field was found that it has dramatically changed to a homogeneous field. This would be despite the interference of the variations of the magnetic poles for humanity. With the photon belt it will be essentially a spiritual experience. The real benefits of this is what is really causing photons. It is linked to convergences. If we are sufficiently evolved, great advances will occur in our consciousness by tuning in to the higher frequencies. The meeting with the photon belt is destined to be a positive experience. The discipline of man is essential. The quality of food, addictions to various foods called essential, must be overcome. The temple of the body to be done must be cleaned of all toxins, all mental and spiritual negativities. Phoenix Azul says goodbye waiting for an early meeting
